

## EXPANDING EAST

The Glass Systems Group, the UK's largest independent sealed unit manufacturer, is successfully expanding its customer base to include the East of England. Glass Systems already has 30 customers in the area it supplies to on a regular basis, and managing director Alan Atkinson anticipates this number is set to increase:

"Historically Glass Systems has not ventured into the Eastern side of England. However following the sad demise of major sealed

unit manufacturer Uniglaze 2, a gap has been left in the market which prompted us take the next step of our expansion.

"Short term customers in East Anglia are being serviced from our existing factory in South Wales, but we have already made a significant investment in plant and machinery, and this business will switch to our new production facility in the area in the coming months."

The expansion is being spearheaded by ex-director

of Uniglaze 2, Mervyn Raby, who joined Glass Systems last November. Mervyn will ensure the transition into this new area and the establishment of the new facility runs smoothly, and will continue to oversee existing customers as well as helping support new ones.

## ENHANCED TECHNICAL SUPPORT

CGI International, the leading independent manufacturer of fire resistant glazing, has developed an enhanced technical support package for its Pyroguard range of fire glass solutions with the launch of a new online 'Applications & Tests Selector'.

This latest version significantly bolsters technical evidence and certification by consolidating all relevant specification information into a single document, which can be immediately printed or saved for future reference. As a web-based resource the selector provides access to real-time technical data, offering peace of mind that the most up-to-date resources are always being used.

Simply select the required criteria: orientation, classification, duration, frame, application, glazing unit and impact classification; and the Applications & Tests Selector will provide access to a detailed technical sheet which features the essential information to support Pyroguard specification.

Paul Wakeling, Project & Specification Manager, CGI International, comments: "We listen closely to what specifiers and our partners need, the result of this being the creation of extensive technical documentation that can be accessed in just a few clicks. In simple terms, we've brought everything into one place which will save even more time when using Pyroguard products on a project."

The Applications & Tests Selector is currently available at [www.pyroguard.eu](http://www.pyroguard.eu). From June 2013, registration will be required and access restricted to approved users only.

Underpinning CGI International's online specification support is an in-house technical sales team, available to assist with fire glass specification, attend project design meetings and deliver CPD seminars.

## EVERYTHING YOU NEED FOR CE MARKING

Selecta Systems has sent a comprehensive guide, 'Everything you need for CE Marking', to all customers well ahead of the 1st July deadline for the new legislation.

Under the new law the company who fits the windows or doors is responsible for making sure the products they install are CE Marked. The business owners are personally liable for any failure to comply. Anyone caught not complying with the law could be prosecuted personally under

Trading Standards. The individual as well as the company found guilty may be fined.

Because CE Marking is an important issue, Selecta Systems is providing a support pack with practical advice and template documents to make it straightforward to CE Mark windows and doors.

"I know how important it is to get practical support from your system supplier that saves you time and money," says Mark Richmond, Selecta Systems sales

and marketing director. "That's why we started helping fabricators get ready for CE Marking back in 2009 by giving them their own Factory Production Control systems for free."

Selecta Systems also has a complete range of composite, bi-fold and patio doors branded Ready-to-Fit that are supplied CE Mark ready.
